Medical backpack for advanced rescue.

ACLS is designed in collaboration with emergency service professional operators.

This backpack allows to put inside of it everything you need for first aid. The backpack has been designed to give the rescuers the chance to work on the site of the intervention without opening the backpack simply exploiting the external pockets for the diagnostic and the medication. On the two sides of the backpack there are two pockets that can be opened with a zipper system all over the perimeter: the first one has been arranged to contain a complete intubation set; the second one is used to contain various dressing material.

On the frontal part of the backpack there is a flap always with a zipper closure system. The flap has a transparent frontal pocket to contain material (ex. pulsoximeter) and on the below part there is a rubber band to fix the cannula. Always on the frontal part a pocket with the same closure system to contain the CHECK LIST and the patient card has been inserted.

Inside the backpack, in the upper part two pockets with velcro flap have been inserted.

The backpack is realized PL 600 and in PVC EXTREME material, easy to wash and to sanitize.

Reflective bands finish the design.

It is produced in Italy and it is customizable with logos
